Details - Target.com

Get the product details for a Target.com product.

{version}/items/{productId}

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
version	Required	v2	
productId	Required		The product id.
key	Required		The key created when the application was registered.
ReviewPage		1	Page number of reviews to display. There are 10 reviews per page. To view reviews 11-20, set ReviewPage=2.

Parameter	Required	Default	Description
ReviewSort		mostrecent	<p>Specifies the order in which reviews are sorted. Valid values are: mostrecent, highestrated, lowestrated, mosthelpful.</p> <ul style="list-style-type: none"> • mostrecent • highestrated • lowestrated • mosthelpful
ResponseGroups		MerchantItemAttributes, ItemAttributes	<p>Accepted values for ResponseGroups (separated by commas) are: BrowseNodes, ItemAttributes, MerchantItemAttributes, Reviews, Variations, VariationSummary, OfferSummary, Offers, PromotionDetails, PromotionSummary, Accessories, RelatedItems, Images.</p>
IdType		TCIN	<p>Type of item identifier used to look up an item.</p> <ul style="list-style-type: none"> • TCIN • ASIN • UPC • DPCI

Example Call

Retrieve product details for an iPod touch with Target product id of 14213720.

```
https://api.target.com/v2/items/14213720?key=[key]
```

    <Description>Engineered for maximum funness. With an ultrathin design, a larger, 4-inch Retina display, a 5-megapixel iSight camera, iTunes and the App Store, Siri, iMessage, FaceTime, Game Center, and more—it's the most fun iPod touch ever. iPod touch features a 6-mm ultrathin design and brilliant, 4-inch Retina display. The 5-megapixel iSight camera lets you take stunning photos, even in panorama, or record 1080p video. Discover music, movies, and more from the iTunes Store, or browse apps and games from the App Store. And with iOS 6—the world's most advanced mobile operating system—you get Siri, iMessage, Facebook integration, FaceTime, Game Center, and more. Now that sounds fun.

Search - Target.com

Search for products on Target.com.

{version}/items

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
version		v2	
key		{key}	
Keywords			Search will happen against all categories for the given keyword. If a BrowseNode (categoryid) is provided, the search will be performed within that category.
BrowseNodeId			Either BrowseNode (categoryid) or keywords (or both) are required. If only categoryid is provided, all items within the category will be returned.

Parameter	Required	Default	Description
PageNumber		1	Page number of results to display. There are 10 results per page. To view results 11-20, set PageNumber=2.
Sort		pmrank	<p>Specifies the order in which reviews are sorted. Results returned in ascending order unless parameter is preceded by "-".</p> <ul style="list-style-type: none"> • pmrank • salesrank • price • titlerank • brandrank
ResponseGroups		ItemAttributes	Accepted values for ResponseGroups (separated by commas) are: ItemAttributes, MerchantItemAttributes, Reviews, OfferSummary, Offers, Images.
Count		10	Number of results to be returned.
MaximumPrice			Maximum price of the items to be returned. Response is sent in lowest currency denomination (pennies). \$30.00 returned as 3000.
MinimumPrice			Minimum price of the items to be returned. Response is sent in lowest currency denomination (pennies). \$30.00 returned as 3000.

Example Call

Perform a keyword search using the keyword "ipod".

[https://api.target.com/v2/items?Keywords=ipod&ResponseGroups=ItemAttributes&key=\[key\]](https://api.target.com/v2/items?Keywords=ipod&ResponseGroups=ItemAttributes&key=[key])

Product Availability

Provides the availability of a product in a geographic area given the product's Department/Class/Item info, and either zip code, or city/state combination. Or, instead of geographic location, the store number can be used.

{version}/products/availability

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
dept	Required		Department ID of the product to search for.
class	Required		Class ID of the product to search for.
item	Required		Product ID of the product to search for.
application		mobile	Application making the request. <ul style="list-style-type: none">• mobile

Parameter	Required	Default	Description
			<ul style="list-style-type: none"> regular
key	Required		Key assigned when application was registered.
city			Name of the city to search. If city/state search used, both city and state are required.
state			State to search. If city/state search is used, both city and state are required.
zipcode			The zipcode to search. If zipcode is used, city/state are not required.
srchRadius			The search radius, in miles.
numSrchRsIts		10	Number of search results to return.
city		Minneapolis	
state		MN	
storeId			The id of the store to search for product availability.

Example Call

Find product availability at the Target store in Plymouth, MN.

```
http://api.target.com/v1/products/availability?city=Plymouth&state=MN&dept=207&class=25&item=0007&numSrchRsIts=10&srchRadius=50&key=[key]
```

Catalogs

Returns the navigation browse structure for Target.com

{version}/catalogs/{catalogId}

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
version	Required	v2	
catalogId	Required		The category to display. 5 returns the top level navigation structure.

Parameter	Required	Default	Description
key	Required		The key issued when application was registered.

Example Call

Retrieve the main category navigation level (5).

```

Get Geocode

GetGeocode allows consumers to geocode locations (by providing latitude and longitude values and bounding box information for the specified Target location). The response contains the bounding box for the geocoded location, its type, and its address, including latitude, longitude, and formatted address. Multiple locations can be returned by the GetGeocode operation, depending on the specificity of the place parameter provided. Locale determines the language of the returned response (e.g., United States or Etats Unis), and provides a constraint to Bing by focusing its search on the designated country.

{version}/location/geocode

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
version	Required		Version identifier. Valid value is v2
place	Required		Free text describing a location or lat,long. Examples include: 55402, Minneapolis, MN, 33 South Sixth Street, Minneapolis, MN, or Minnesota Zoo.
limit			Maximum number of results to return – can vary from 1 to 20, default is 5 (0 returns 5 results, values over 20 return 20 results).

Parameter	Required	Default	Description
key	Required		Application identifier. Each calling application must register for a key at https://developer.target.com/user/register .
locale			<p>Locale identifier that will provide context for geocoding requests. Street addresses that return no values using default locale may return multiple ambiguous Canadian addresses when locale is en-CA or fr-CA.</p> <ul style="list-style-type: none"> • en-US • en-CA • fr-CA

Example Call

Get geocode for the Minnesota Zoo.

```
http://api.target.com/v2/location/geocode?place=Minnesota%20Zoo&key=[key]
```

Sample Responses

Get Location Details

Get Location Details returns a response containing standard location information (address including county and country, latitude and longitude), telephone numbers and hours (for both the location and its capabilities), and organizational hierarchy where appropriate (Region, Group, District) associated with the location identified by the ID parameter provided by the consumer.

{version}/location/{Id}

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
Id	Required		ID of the desired location. Examples: 3 or 3507
version	Required		Version identifier. Valid value is v2.
locale		en-US	Single language and country specifier. Valid values are: en-US, en-CA, fr-CA. Locale identifier that will influence response in this way: all Canada distances are in km; all French times are 24-hour format; French day and capability names, as well as alternate hours text. <ul style="list-style-type: none">• en-US• en-CA

Parameter	Required	Default	Description
			<ul style="list-style-type: none"> fr-CA
key	Required		Key assigned when application was registered.

Example Call

Obtain information in English about a location identified by the {ID} parameter.

```
http://api.target.com/v2/location/3?locale=en-US&key=[key]
```

Get Locations by Admin Area

Get Locations By Admin Area returns a response containing standard location information (address including county and country, latitude and longitude), telephone numbers and hours (for both the location and its capabilities), and organizational hierarchy (Region, Group, District) associated where appropriate with any location located in the state or province specified by the adminarea parameter provided by the consumer.

{version}/location

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
adminarea	Required		2 letter State of Province code. Examples: MN or QC.
version	Required		Version identifier. Valid value is v2.
locale		en-US	<p>Single language and country specifier. Valid values are: en-US, en-CA, fr-CA. Locale identifier that will influence response in this way: all Canada distances are in km; all French times are 24-hour format; French day and capability names, as well as alternate hours text.</p> <ul style="list-style-type: none">• en-US

Parameter	Required	Default	Description
			<ul style="list-style-type: none"> en-CA fr-CA
limit		250	Maximum number of locations to retrieve.
offset		0	Number of locations to skip in the return set. Use in conjunction with limit; i.e., offset=0 for first page, offset=100 for second page when limit=100.
key	Required		Key assigned when application was registered.

Example Call

Obtain the list in English of locations in Hawaii.

```
http://api.target.com/v2/location?adminarea=hi&locale=en-US&key=[key]
```

Get Map By Coordinates

Get Map By Coordinates returns a static map centered on the coordinates provided by the consumer at the zoom level requested. The map's metadata, comprising its bounding box, zoom level, center point, and a map URL to retrieve the map image, can also be returned, but not in the same call. Consumers can specify the type of map (aerial, road, or aerial with labels), the map size, and the zoom level. The response contains either a .jpg image of a map centered on the specified place showing labels in the appropriate language, or the metadata about that same map, including the bounding box, the latitude and longitude of the centerpoint, the zoom level, and the map size. The metadata response also contains a URL for the map image corresponding to the returned metadata.

{version}/location/map/{type}/{mapMetaData}/{coordinates}/{zoomlevel}

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
type	Required		Type of map desired. <ul style="list-style-type: none">• road• aerial• aerialwithlabels
coordinates	Required		Latitude and longitude of the map's center; e.g., 47.61,-122.11

Parameter	Required	Default	Description
zoomlevel	Required	10	A number from 1 to 20 indicating the desired zoom level. Not all zoom levels are available for all coordinates.
limit		5	Maximum number of results to return – can vary from 1 to 20.
key			Application identifier. Each calling application must register for a key at https://developer.target.com/user/register .
version	Required	v2	Version identifier. Valid value is v2
mapMetaData	Required		Indicator of whether metadata or image should be returned. <ul style="list-style-type: none"> • metadata • image
mapSize		350x350	Size in pixels; maximum size is 900x834.

Example Call

Get map for a Target store's longitude and latitude at a zoom level of 10.

```
http://api.target.com/v2/location/map/road/image/47.61,-122.11/10?key=[key]
```

Sample Response

Get Map By Place

Get Map By Place returns a static map centered on a place named by the consumer. The map's metadata, comprising its bounding box, zoom level, center point, and a map URL to retrieve the map image, can also be returned, but not in the same call. Consumers can specify the type of map (aerial, road, or aerial with labels), the map size, pushpins that should appear on the map, and the locale. The response contains either a .jpg image of a map centered on the specified place showing labels in the appropriate language, or the metadata about that same map, including the bounding box, the pushpins, the latitude and longitude of the centerpoint, the zoom level, and the map size. The metadata response also contains a URL for the map image corresponding to the returned metadata.

{version}/location/map/{type}/{mapMetaData}/{place}

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
type	Required		Type of map desired. <ul style="list-style-type: none">• road• aerial• aerialwithlabels
mapMetaData	Required		Indicator of whether metadata or image should be returned.

Parameter	Required	Default	Description
			<ul style="list-style-type: none"> • metadata • image
place	Required		Place, free text describing a location or lat,long. Examples are 55402, "Minneapolis, MN", "33 South Sixth Street, Minneapolis, MN", "Minnesota Zoo"
key	Required		Application identifier. Each calling application must register for a key at https://developer.target.com/user/register .
version	Required		Version identifier. Valid value is v2
limit		5	Maximum number of results to return – can vary from 1 to 20.
mapSize		350x350	Size in pixels; maximum size is 900x834.
pushpin			A series of values that include a Point value (latitude and longitude) with options to add a label of up to three (3) characters and to specify an icon style. You can specify up to 18 pushpins within a URL.
locale		en-US	<p>Locale identifier that will determine what language is used for map labels; i.e., en-US or en-CA gives Lake Superior, but fr-CA gives Lac Supérieur. Valid values are en-US, en-CA, fr-CA.</p> <ul style="list-style-type: none"> • en-US • en-CA

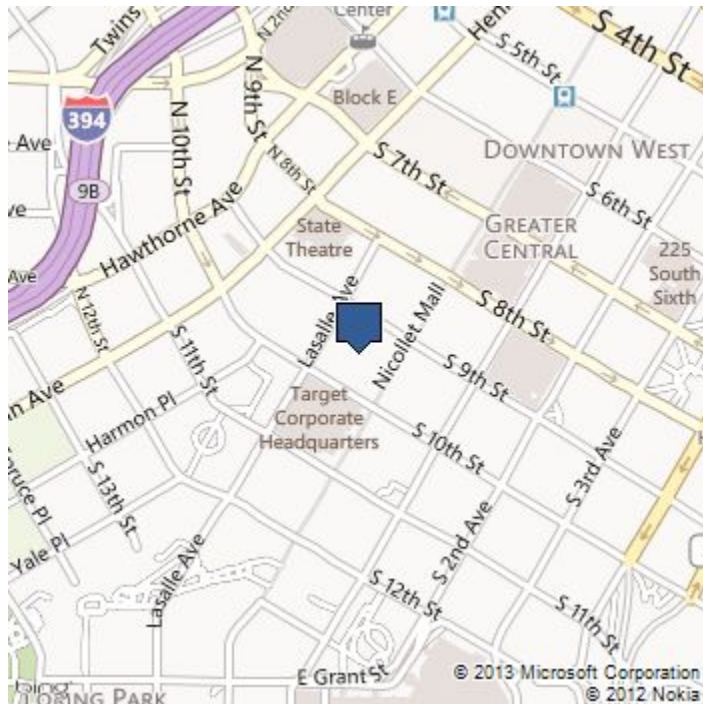

Parameter	Required	Default	Description
			<ul style="list-style-type: none"> fr-CA

Example Call

Get Map for a Target store's address with English labels.

[http://api.target.com/v2/location/map/road/image/900%20Nicollet%20Mall,%20Minneapolis,%20MN?key=\[key\]](http://api.target.com/v2/location/map/road/image/900%20Nicollet%20Mall,%20Minneapolis,%20MN?key=[key])

Sample Response

Get Map By Route

Get Map By Route returns a static map showing the route described by directions between the origin and the destination in the language specified by the locale parameter. The route can be customized to either a driving or walking travel mode and optimized for time, distance, or time with traffic. This operation can be invoked by the URL provided in the response of the Get Route operation to return a map for the specified route. The response contains either a .jpg image of the map, or the metadata about that same map, including the bounding box, the latitude and longitude of the centerpoint, the zoom level, and the map size. The metadata response also contains a URL for the map image corresponding to the returned metadata.

{version}/location/map/{type}/route/{mapMetaData}/{travelMode}

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
travelMode	Required		Indicator of whether directions and timings will be for walking or driving (although Bing supports transit, it will not be supported in v2). <ul style="list-style-type: none">• walking• driving
origin	Required		Free text describing a location or lat,long. Examples include: 55402, Minneapolis, MN, 33 South Sixth Street, Minneapolis, MN, or Minnesota Zoo.

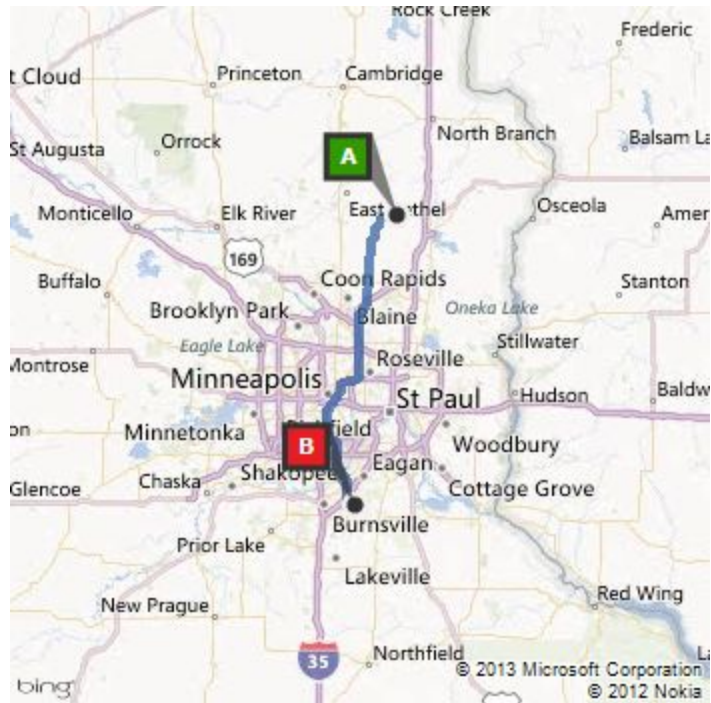

Parameter	Required	Default	Description
destination	Required		Free text describing a location or lat,long. Examples include: 55402, Minneapolis, MN, 33 South Sixth Street, Minneapolis, MN, or Minnesota Zoo.
optimize	Required		Preference for what should be optimized in returned route. Examples include: time, distance, timeWithTraffic.
key	Required		Application identifier. Each calling application must register for a key at https://developer.target.com/user/register .
version	Required	v2	Version identifier. Valid value is v2
type	Required		Type of map desired. <ul style="list-style-type: none"> • road • aerial • aerialwithlabels
mapMetaData	Required		Indicator of whether metadata or image should be returned. <ul style="list-style-type: none"> • metadata • image

Example Call

Get map corresponding to driving directions from Wyoming, MN to the Minnesota Zoo.

```
http://api.target.com/v2/location/map/road/route/image/driving?origin=55092&destination=Minnesota%20Zoo&optimize=time&key=[key]
```

Sample Responses

Get Nearby Stores

Get Nearby Stores returns a list of open stores within a specified distance of a particular place, which can be a city, state, zip code, latitude/longitude pair, or a country. The default length of the list is 100 stores, and the default distance is 250 miles. The default locale is US English, but the service returns French capability names and 24-hour times if Canadian French is required. The response contains standard location information (address including county and country, latitude and longitude), distance from specified place, telephone numbers and hours for the store and its capabilities, and organizational hierarchy (Region, Group, District) associated with each store.

{version}/store

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
nearby	Required		Place, which is free text describing a location or lat,long. Examples: 44.979035,-93.26493; 55402; Minneapolis, MN; 33 South Sixth Street, Minneapolis, MN; Minnesota Zoo
limit		100	Number of store locations to retrieve.
offset		0	Number of locations to skip in the return set. Use in conjunction with limit; i.e., offset=0 for first page, offset = 100 for second page when limit is 100.

Parameter	Required	Default	Description
range		250	Range in miles for US and km for Canada to limit search. Use in conjunction with nearby parameter.
storetype			Comma-separated list of desired store subtypes to further limit results. Choosing any of the following will include only those stores of the designated subtype: SuperTarget, Greatland, City
locale		en-US	<p>Single language and country specifier. Valid values are: en-US, en-CA, fr-CA. Locale identifier that will influence response in this way: all Canada distances are in km; all French times are 24-hour format; French day and capability names, as well as alternate hours text.</p> <ul style="list-style-type: none"> • en-US • en-CA • fr-CA
key	Required		Key assigned when application was registered.
version	Required		Version identifier. Valid value is v2.
capabilities			Comma-separated list of desired capabilities to further limit results. Choosing any of the following will include only those stores having all of the desired capabilities: uniform, pharmacy, optical, photolab, clinic, portrait, freshgrocery, flushot, mobilekiosk, apple (In-Store Apple Store). Specifying food returns stores with subtype of SuperTarget or PFresh or with the Fresh Grocery capability.

Parameter	Required	Default	Description
adminArea			Country or state filter. Valid values exist at two levels. Country-level can be United States or Canada. Subdivision-level can be any state or province. Specifying adminArea will result in only stores that meet all capability criteria and adminArea criteria.
adminAreaType			Specification of which filter to use - country or state. Required if adminArea is specified. Valid values are: country or subdivision

Example Call

Return up to 5 stores within 10 miles of the specified latitude and longitude.

```
http://api.target.com/v2/store?nearby=44.976034,-93.270196&range=10&limit=5&locale=en-US&key=[key]

Get Route

GetRoute returns directions corresponding to a route between the origin and the destination in the language specified by the locale parameter. The route can be customized to either a driving or walking travel mode and optimized for time, distance, or time with traffic.

The response contains turn-by-turn directions from the origin to the destination, the coordinates of the starting point and ending point, and the bounding box for a map of the directions. Travel distance and time required for each leg are also returned in the response. US distances are in miles, while Canadian distances are in kilometers.

{version}/location/route/{travelMode}

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
origin	Required		Free text describing a location or lat,long. Examples include: 55402, Minneapolis, MN, 33 South Sixth Street, Minneapolis, MN, or Minnesota Zoo.
destination	Required		Free text describing a location or lat,long. Examples include: 55402, Minneapolis, MN, 33 South Sixth Street, Minneapolis, MN, or Minnesota Zoo.
distanceUnit		km	Value to be used in calculating turn-by-turn directions and total distance. Examples are: mile or

Parameter	Required	Default	Description
			mi, kilometer or km
optimize		time	Preference for what should be optimized in returned route. Examples include: time, distance, timeWithTraffic.
locale		en-US	Locale identifier that will influence response in this way: all Canada distances are in km by default, directions will be in French for fr-CA locale. Supported values are en-US, en-CA, and fr-CA.
key	Required		Consumer's API key.
travelMode	Required		Indicator of whether directions and timings will be for walking or driving (although Bing supports transit, it will not be supported in v2). Valid values are walking and driving.
version	Required		v2 is the current version.

Example Call

Get driving directions between Wyoming, MN and Minnesota Zoo.

```
http://api.target.com/v2/location/route/driving?origin=55092&destination=Minnesota%20Zoo&locale=en-US&key=[key]

Get Store Details

GetStoreDetails returns a response containing standard location information (address including county and country, latitude and longitude), telephone numbers and hours (for both the store and its capabilities), and organizational hierarchy (Region, Group, District) associated with the store identified by the ID parameter provided by the consumer.

{version}/store/{storeId}

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
storeId	Required		ID of the desired store. Examples: 3 or 3507
version	Required		Version identifier. Valid value is v2.
locale		en-US	Single language and country specifier. Valid values are: en-US, en-CA, fr-CA. Locale identifier that will influence response in this way: all Canada distances are in km; all French times are 24-hour format; French day and capability names, as well as alternate hours text. <ul style="list-style-type: none">• en-US• en-CA

Parameter	Required	Default	Description
			<ul style="list-style-type: none"> fr-CA
key	Required		Key assigned when application was registered.

Example Call

Get store details for store number 1792.

```
http://api.target.com/v2/store/1792?locale=en-US&key=[key]
```

Get Stores By Admin Area

Get Stores By Admin Area returns a response containing standard location information (address including county and country, latitude and longitude), telephone numbers and hours (for both the store and its capabilities), and organizational hierarchy (Region, Group, District) associated with any store located in the state or province specified by the adminarea parameter provided by the consumer.

{version}/store

Formats

Pass the accept header in the HTTP request:

- Accept: application/xml (default)
- Accept: application/json

Parameters

Parameter	Required	Default	Description
limit			Number of store locations to retrieve. Max of 250.
offset		0	Number of locations to skip in the return set. Use in conjunction with limit; i.e., offset=0 for first page, offset = 100 for second page when limit is 100.
key	Required		Application identifier. Each calling application must register for a key at https://developer.target.com/user/register .

Parameter	Required	Default	Description
locale			<p>Single language and country specifier. Valid values are: en-US, en-CA, fr-CA. Locale identifier that will influence response in this way: all Canada distances are in km; all French times are 24-hour format; French day and capability names, as well as alternate hours text.</p> <ul style="list-style-type: none"> • en-US • en-CA • fr-CA
version	Required		Version identifier. Valid value is v2.
adminarea	Required		state or province. Examples: MN or QC

Example Call

Obtain the list in English of stores in Hawaii.

```
http://api.target.com/v2/store?adminarea=HI&locale=en-US&key=[key]
